

# Media Kit for **The Forgotten Milestone**

A Children's Coloring & Activity Book for **Pattern Recognition**, an Essential yet Overlooked Component of Childhood Development

## The Book

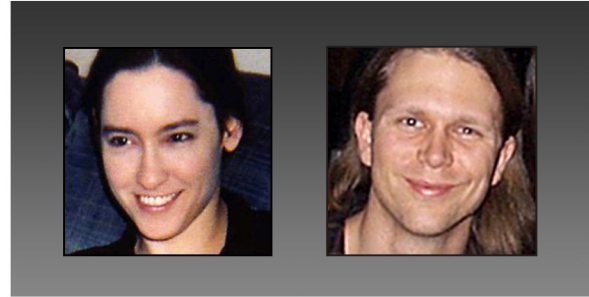

Pattern Recognition is one of our most important cognitive skills, yet it is surprisingly underrepresented in childhood education. This book was developed to fill that void using fun learning activities.

Pattern Recognition is part of the cognitive toolset we use for problem solving in subjects like Math, Science and Language. It is used in conjunction with inductive reasoning to not only identify the patterns of a problem, but help us determine the most logical path toward a solution.

This book is recommended for children ages 3 to 10. Each activity can be a little more or less challenging for a child depending on his or her individual experience level, so guiding the child through the exercises is encouraged.

## The Authors

**Stacy Otillo** was born and raised in New Orleans and is the mother of 2 children. She enjoys homeschooling and writing about topics in science and math for children.

Stacy received her degree in Mathematics from the University of New Orleans and has always loved tutoring and helping math and science students even as a college student herself.

Once her children reached school age, Stacy and her husband decided to homeschool and began to publish much of what they were teaching their children.

**Frank Otillo** was born in New Orleans in 1971. His lifelong love for math and science led him to receive a degree in Mathematics from The University of New Orleans and pursue a career in technology.

Frank always felt that there were too few science and math related resources available to actually prepare today's children for the world that lies ahead - a fast-paced world dominated by technology and data.

This void in children's resources became all too apparent when Frank and his wife Stacy began shopping for homeschooling material for their own two young children - from that point forward they were committed to developing material with a focus on problem solving and analytical skills.

**Readers Page:** Not only are there solutions in the back of the book, but we also have an online support page for our readers which includes full color HD YouTube solutions, free printable worksheets and other free resources!
