

Human Body Systems 2: Choose the one best answer for each question.

1. Which system produces hormones that control growth and development?

- A) Endocrine system B) Respiratory system
 C) Skeletal system D) Digestive system

2. Which body system removes waste from the blood?

- A) Muscular system B) Excretory system
 C) Nervous system D) Skeletal system

3. When you run and your heart beats faster, which two systems are working closely together?

- A) Digestive and skeletal systems B) Respiratory and circulatory systems
 C) Endocrine and skeletal systems D) Excretory and nervous systems

4. Which system helps protect the body from germs and disease?

- A) Immune system B) Muscular system
 C) Digestive system D) Respiratory system

5. Which system sends electrical signals throughout the body?

- A) Circulatory system B) Endocrine system
 C) Nervous system D) Respiratory system

6. Which two systems work together to allow you to bend your arm?

- A) Muscular and skeletal systems B) Digestive and endocrine systems
 C) Respiratory and immune systems D) Excretory and circulatory systems

7. If the lungs could not take in oxygen, which system would be affected first?

- A) Circulatory system B) Skeletal system
 C) Digestive system D) Muscular system

8. Which organ belongs to the excretory system?

- A) Kidney B) Heart
 C) Liver D) Brain

9. Which system is mainly responsible for helping the body maintain balance and coordination?

- A) Nervous system B) Digestive system
 C) Respiratory system D) Circulatory system
