

## The Book

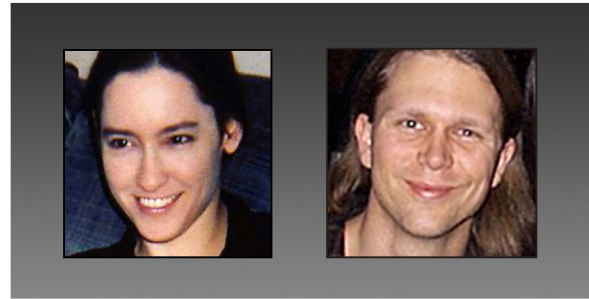

Puzzles are great for learning and lots of fun! This unique book was designed to help children build spelling, writing and problem solving skills by grouping puzzles into sets that work together.

The themed sets of Crossword Puzzles, Word Searches and Word Scrambles feature the same educational answers but offer different ways of finding them. If a child is unsure of the answer to a crossword clue or how to spell that answer, they can find it in the word search. They can then reinforce their spelling and writing skills by solving the word scramble!

This book is great for independent learning or group activity. Recommended for ages 5-10.

## The Authors

**Stacy Otillo** was born and raised in New Orleans and is the mother of 2 children. She enjoys homeschooling and writing about topics in science and math for children.

Stacy received her degree in Mathematics from the University of New Orleans and has always loved tutoring and helping math and science students even as a college student herself.

Once her children reached school age, Stacy and her husband decided to homeschool and began to publish much of what they were teaching their children.

**Frank Otillo** was born in New Orleans in 1971. His lifelong love for math and science led him to receive a degree in Mathematics from The University of New Orleans and pursue a career in technology.

Frank always felt that there were too few science and math related resources available to actually prepare today's children for the world that lies ahead - a fast-paced world dominated by technology and data.

This void in children's resources became all too apparent when Frank and his wife Stacy began shopping for homeschooling material for their own two young children - from that point forward they were committed to developing material with a focus on problem solving and analytical skills.

**Additional Resources:** In addition to our Children's Educational Books, our website has tons of other free printable resources, activities, worksheets and games for children at a variety of ages and skill levels.
